

DIGITALIZATION AND OUR MARKET

In the context of global digitalization and informatization, the national policies such as "Digital China" and "Cyberpower" will boost the transformation and upgrade of domestic telecommunications operators to continuously enhance the network infrastructure construction in areas such as 5G, which will bring additional demand for services outsourcing such as maintenance and supply chain. Meanwhile, the development of "Smart Society", 5G, Internet of Things and Big Data in China will also drive additional demand from the domestic non-telecom operator market for Smart City, Smart Park, Smart Security, Smart Transportation, Information Security and Cloud Computing. In addition, the national "Belt and Road" Initiative and the informatization development worldwide will also boost the demand for infrastructure network construction and ICT in overseas market.
